

Prestige®

Stenotaphrum secundatum 'PAL42' (b) intended

DROUGHT TOLERANT TURF

Prestige®

Darkest Green Buffalo

Stenotaphrum secundatum 'PAL42' (b)

Prestige® in our trial plots (front) is the darkest green of any Buffalo.

Dark green all year round. Quicker grow in.

- When buying a lawn, most people want the darkest green lawn available. Prestige® turf delivers exactly that—the darkest green of any Buffalo.
- It was bred from the popular Palmetto® Buffalo, retaining the benefits of excellent cold and drought tolerance and outstanding winter colour.
- Unlike Palmetto® turf, Prestige® Buffalo has 20% faster growth, allowing it to recover quickly from wear damage. For the farmer, this means quicker crop rotation.
- In our trial plots, Prestige® Buffalo has constantly shown a darker green colour for most of the year (see photo). For those who desire the darkest green lawn in the street, Prestige® Buffalo is it.
- Harvesting has shown to be fruitful, and the strength of the sod has been outstanding.
- Disease tolerance to grey leaf spot has been better than others, and thatch is on par with Palmetto® turf, which is known to be a low thatch variety.
- Trials have shown it to grow well in shade.

Description	Darker green Buffalo turf
Mowing Height	2–5cm full sun; 5–7cm in shade
Best Planting Time	August to May
Uses	Home and commercial, sun and shade lawns
Position	Full sun to moderately heavy shade; Drought & frost tolerant
Soil Type	Sandy loam to clay type soils
